

YAMATO CLASS STARSHIP

The Yamato class Starship is one of a hand full of Battleship classes that the United Federation of Planets commissioned for the Starfleet between 2270 and 2310.

The Yamato was commissioned as an advanced technology testbed. Over 850m long and massing more than 6 million tons Yamato is by far one of the largest Starships ever built by the Federation crewing 1200 beings. Weapons include phasers, photon torpedoes, and the first ship mounted assault phaser cannon.
